

Function

Back-up rings or Anti Extrusion Rings do not have a sealing function. They are designed to prevent elastic sealing elements of gap extrusion.

Features

- ⇒ Active Anti Extrusion Ring for Rod Seal RS02
- ⇒ Reduced gap extrusion of the elastomer seal and/or higher pressures up to 700bar possible
- ⇒ Prevention of twisting of the seal in the groove.
- ⇒ Available as split non-split version.

Application

dynamic and static applications in reciprocating pistons and rods in hydraulic cylinders, plungers, etc.

Unfavourable tolerances and wide gap dimensions.

Installation

Snap-in installation
