

Function

Guiding elements are designed to prevent metal to metal contact between components of hydraulic systems e.g. piston and cylinder barrel or shaft and cylinder head.

Features

- ⇒ Normally cut at an angle for easy installation, but also available as non-split version.
- ⇒ For use in rod applications.
- ⇒ Design combines guiding and backing function.
- ⇒ Low dynamic friction.
- ⇒ Low break-away forces after long standstills.

Application

Reciprocating rods in hydraulic cylinders, plungers, etc.
Max. speed 4 m/s, radial loads max. 70 N/mm².

Installation

Snap-in installation.
